30-Day Guarantee Protection Checklist

A PickZox exclusive bonus for BeaconQ AI buyers. BeaconQ launched with big claims and a real 30-day guarantee. This plan tests the claims inside the window — while a one-line email can still refund you.

Day 1 — Set Up Your Evidence

- Save your purchase receipt and the sales-page promises (screenshot the guarantee terms).
- Create one folder for this test. Every output, screenshot, and timestamp goes there.
- Write down the three jobs you most want the platform to do. These are your test cases.

Week 1 — The Core Loop

- Run test case 1 through the full 5-stage loop: Research, Plan, Create, Review, Deliver.
- Judge the output as a paying client would. Would you publish or send it as-is?
- Note where you had to steer, correct, or redo work. Steering is fine; redoing is a cost.
- Check the transparency trail: can you actually see why the agents made their choices?

Week 2 — Breadth

- Run test cases 2 and 3, in different work types than case 1 (content, campaign, research, app).
- Try App Morph on one small tool you currently pay a subscription for.
- Time everything. 'Autonomous' should mean your minutes go down, not up.

Week 3 — Stress

- Give the platform one deliberately vague brief. A good system asks or flags; a weak one guesses confidently.
- Give it one task with a factual trap (a wrong premise). Does Review catch it?
- Contact support once with a real question. Response speed and quality are part of the product.

Days 25 to 30 — Decide

- Score the three test cases: publishable as-is / publishable with edits / not usable.
- If two of three are 'not usable', the claims failed your test — email for the refund before day 30.
- If you keep it, note which work types earned trust and brief only those first in month two.
- Either way, keep the evidence folder. Your future self, and any review you write, will thank you.

The guarantee is only protection if you test inside the window. Thirty days pass quickly — start on day one. — PickZox
