Go Beaver AI Quick-Start Checklist

Your first week with Go Beaver AI — one focused task per day, plus four guardrails that keep you safe.

The First 7 Days

- Day 1: Connect your ad-spy searches — save 10 competitor advertisers in your niche
- Day 2: Swipe your first 5 ads and break them down (hook, angle, proof, CTA)
- Day 3: Generate your first ad set: 3 variations of one angle, never 1
- Day 4: Build a 7-day social content batch with the generator and schedule it
- Day 5: Write one email sequence (3 emails) for your main offer
- Day 6: Produce one short video script (TikTok/Reels) from your best ad
- Day 7: Review what you created, save the winners as templates, plan week two

Four Guardrails

- Model structure, never copy wording — rewrite everything in your voice
- Ignore the income screenshots in any marketing; judge the tool on time saved
- Keep the 30-day guarantee window in mind: test the core workflow in week one
- If you took the Scheduler or Affiliate Club trials, set a calendar reminder before they bill
