PLR Rights & Asset Inventory Tracker

A permanent register for every file you own — so Step 1 takes minutes — a free bonus from Pickzox

How to Use This Register

Add one row per asset the day you buy or create it. Record the exact rights from the licence file, not from memory. When a Goldmine session starts, filter this register for unused assets with sellable rights. Your audit is then already done.

The Register

Asset	Source & date	Rights held
Example: Gardening PLR pack	WarriorPlus, Mar 2026	Edit, rebrand, sell as my own

Rights Shorthand

Use short codes in the Rights column: PU = personal use only. CU = commercial use for finished products. PLR = edit and resell as your own. RR = resell rights. MRR = master resell rights. When a licence is unclear, write UNKNOWN and check before building. Unknown rights mean no product, ever.

Session Log

- Note each Goldmine session: date, asset, winning idea, score.
- Mark assets DONE once their brief is written.
- Review the register monthly for forgotten high scorers.
- Back this file up with the library it describes.
