Workbook Prompt Customization Pack

A PickZox exclusive bonus for NeuroKids Workbook Creator AI buyers. Twelve copy-paste modifiers that adapt any prompt in the pack to a specific child, age, or need.

How to use this pack: paste one modifier at the END of any NeuroKids prompt, before you run it. One modifier at a time gives the cleanest output.

Age Band 4–6

"Rewrite this for ages 4 to 6: maximum 8 words per instruction, one picture-led activity per page, no reading required beyond single words."

Age Band 7–9

"Rewrite this for ages 7 to 9: simple two-step instructions, short writing lines, and one example completed first."

Age Band 10–12

"Rewrite this for ages 10 to 12: respectful, non-babyish tone, real-life scenarios, and space for written reflection."

ADHD-Friendly Pacing

"Break this into micro-steps of under two minutes each, add a checkbox after every step, and include one movement break."

Autism-Friendly Structure

"Add a visual schedule of the activity steps, predictable page layout, literal language only, and a 'what happens next' line on each page."

Dyslexia-Friendly Layout

"Specify a dyslexia-friendly layout: sans-serif font at 14pt or larger, 1.5 line spacing, left-aligned text, no italics, cream background."

Emotional Regulation Deepening

"Add a feelings check-in scale of 1 to 5 at the start and end, plus one calming strategy box on every third page."

Difficulty Ramp

"Create three versions of this activity — starter, standard, and stretch — clearly labeled, so the child can progress."

Answer Key Generation

"After the activity, generate a separate answer key and a one-line explanation for each answer, formatted for a parent guide page."

Parent Guide Page

"Write a 120-word parent guide for this activity: its goal, what to say, what to do if the child gets frustrated, and how to praise effort."

Seasonal Edition

"Re-theme this activity for [season/holiday] with new examples and illustrations prompts, keeping the same skill and structure."

Bundle Planner

"List how this workbook could combine with two complementary skill topics into a bundle, and write the bundle's table of contents."

Remember: modified output still needs your own read-through before it goes near a child or a customer. The modifier shapes the draft — your judgment ships the product. — PickZox
