How a Framework Works

Every framework below has 6 slots: subject, setting, season, palette, frame, and the date rule. Fill each slot, then add the date rule word for word. The date rule is the part most prompt packs skip, and it is the reason AI calendars come out with wrong weekdays and misspelled months.

Date rule (use it every time): "Exact 2027 calendar grid, Sunday start, full weekday names, no misspellings, 17 US holidays on their correct days."

The 30-Second Date Check

- Month name spelled correctly.
- First day of the month on the right weekday (May 2027 starts on a Saturday).
- Correct number of days (February 2027 has 28).
- Holidays on the right days (Mother's Day May 9, Memorial Day May 31).
- No invented words in the grid.

If anything is wrong, regenerate the page or place the matching Perfect-Date Overlay over the grid in Canva. Never print or list a page that fails the check.

Print Checklist

- Upscale to 2550 x 3300 px for 300 DPI US Letter.
- Export a separate A4 version for buyers outside the US.
- Print one test page before you print twelve.
- Use matte paper for watercolor styles; it hides banding.
